

**PATENT**  
Attorney Docket No. **KOPFER-07936**

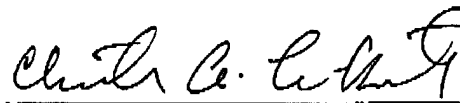

### REMARKS

Applicant hereby amends the Specification and Drawings, in order to further the prosecution of the present application and Applicant's business interests, yet without acquiescing to the Examiner's arguments. Applicant reserves the right to prosecute the original, similar, or broader claims in one or more future application(s). These amendments do not introduce new matter and do not narrow the scope of the claims within the meaning of *Festo*.<sup>1</sup> In particular, Applicant hereby amends Figure 1 to show baffled vents on the front surface and a serrated pattern on the back surface, of an exemplary inner liner. In addition, Applicant has amended the Specification to recite "the front surface of the inner liner comprises indirect baffled vents 14, and the back surface of the inner liner comprises a serrated pattern 26." Support for these amendments can be found for instance in the text of original Claim 15, and in the Description, which teaches "to prevent sweating and moisture build-up, in some embodiments, the inner liner comprises a serrated surface adjacent to the face" (Specification, at page 7, lines 29-31).

Applicant believes the amendments and remarks set forth above traverse the Examiner's rejections and, therefore requests that a timely Notice of Allowance be issued in this case. However, should the Examiner believe that a telephone interview would aid in the prosecution of this application, Applicant encourages the Examiner to call the undersigned collect.
